## (54) PHOTORESISTIVE RESIN COMPOSITION

## (57)Abstract:

**PROBLEM TO BE SOLVED:** To obtain a photosensitive resin compsn. using a relatively small amt. of Fullerene and curable with visible light.

**SOLUTION:** This photosensitive resin compsn. contains Fullerene and a high molecular compd. having a functional group capable of reacting with the Fullerene under irradiation with visible light. A negative type image element is formed as follows; a layer of this compsn. is formed and irradiated with visible light through a photomask having a visible radiation transmitting pattern, the irradiated part in the layer is cured and the uncured part in the layer is removed to form a patterned resist film. A device is produced by etching an image forming layer through the resist film and then removing the resist film.

## LEGAL STATUS

[Date of request for examination] 22.07.1998

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 2878654

[Date of registration] 22.01.1999

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
